- Postpartum scars

Medical Device

MADE IN ITALY

PERINEAL TISSUE ELASTICITY

DESCRIPTION

CAREGYN EMULGEL is a medical device that, when used in conjunction with proper pelvic floor exercises, helps maintain and restore the elasticity and tone of the perineal tissue. It is also useful in preventing the formation of stretch marks.

Thoroughly wash hands and apply approximately 5 ml, gently massaging in circular motions on the affected area at least once a day, preferably in the evening before bedtime.

THERAPEUTIC INDICATIONS

- Moisturizing, regenerating and antioxidant properties
- Prevents red and white stretch marks
- Improves elasticity of perianal tissue, reducing the risk of tearing during delivery
